Arbitrage Trading

What is Arbitrage?

Arbitrage is buying a product at one price and selling it at the same time at a higher price, guaranteeing the profit.

We arbitrage digital assets including crypto coins & currencies.

Our software monitors specific currencies & coins from multiple exchanges across the world and finds the highest price inefficiencies available.

The profits from Arbitrage are relatively low, however the risk is similarly low.

How it Works

Initially, AIM utilizes your Single Discretionary Allowance (SDA) to execute a trade of One Million Rand on your behalf.

Single discretionary allowance means the One Million Rand allowance available to South African residents (natural persons) 18 years and older per calendar year.

Once this SDA trade is completed, we proceed to apply for approval of your International Transfer Allowance (ITA) through SARS, allowing you to conduct an additional R10,000,000 in trades throughout the year.

For ease and flexibility, we divide your ITA allowance into four separate R2,500,000 trades. Altogether, we can execute trades totaling R11,000,000 on your behalf throughout the year, if you qualify.

This product is designed to help you make the most of your financial potential while benefiting from our expertise and market insights.

How can I start to Arbitrage?

Aim provides low-cost financing for arbitrage trading.

We take an entrepreneurial approach when it comes to our finance offerings.

We provide clients with initial capital that allows them to trade the full R11 Million Allowance each calendar year without having to invest their own funds.

This enables our clients to start Arbitrage immediately and ensures that our clients have enough capital available to maximise their profits when it matters most.
